- **Summary**

# BACKGROUND

## NAVSSI Lite

### Hardware – Processors

- MARNER U10 UltraSparc Workstation
  - SUN *SPARCengine* ULTRA AXI
  - Solaris 8 Operating System
- 4U Ruggedized Rackmount
- Main Memory: 512MB
- One 36 GB SCSI LVD
- 32X CD-ROM Drive, Floppy Disk Drive
- Intecolor FP18
- NEC MultiSync LCD 1800

# BACKGROUND NAVSSI Human - Computer Interface

STANDARD NAVIGATION REPORT

Based on a GPS 1 SPS fix at 16:28:09  
hold you on track.  
Recommend you come right to course 101.2. Base course is 087.8.  
Nearest hazard is shoal water at 2536 yds off the Stbd Bow  
Next Aid is alcatraz at 2176 yds off the Port Beam  
Depth beneath the keel is 63 ft.  
Distance remaining to turnpoint is 3077 yds.  
Time to turn is 18.2 minutes. at 16:46.4.  
Next course is 131.1 for a distance of 1.6 nm.  
Set and drift is 037.4 at 1.3 kts.

# BACKGROUND

## Piloting Guidance

### Automatically calculates:

- cross-track error
- recommended course to steer accounting for set/drift
- nearest hazard
- next navigation aid
- depth
- distance and time to turn

#### STANDARD NAVIGATION REPORT

Based on a GPS 1 SPS fix at 15:53:57  
hold you 8 yds left of track.  
Recommend you come right to course 065.4. Base course is 058.8.  
Nearest hazard is Shoal Water at 2091 yds off the Stbd Bow  
Next Aid is Nsf1 at 2280 yds off the Stbd Bow  
Depth beneath the keel is 91 ft.  
Distance remaining to turnpoint is 2678 yds.  
Time to turn is 7.9 minutes. at 16:01.9.  
Next course is 087.8 for a distance of 3.1 nm.  
Set and drift is 242.6 at 0.6 kts.

# BACKGROUND Radar Overlay

# BACKGROUND

## Collision Avoidance

# BACKGROUND GOOD NEWS

- COMMENTS from the Navigator on USS Hamilton

"Sir,  
The Build IV is **much more capable** than the Build that we previously had. I only got to play around with our old system for a day of underway but the one day out here showed that there are **many more features** on this Build and they are **easier to figure out**. Last night's game allowed us to follow a laid out track. The system gives a **very good display** of the info that we look for on the WRN-6, ie Time to turn, Dist to turn, bearing to turn. It also adds in a few other numbers such as recommended course to that point, next leg course and distance."

# BACKGROUND

## More Good News

. Comments from Gene Guest and Brian Boyce of MSI (Retired USN CAPT)

"Bottom line - they like it. The CO has confidence in it and stated that he would be comfortable transitioning to paperless navigation. allows the input of visual LOP's and/or radar ranges to supplement the GPS position or in the event GPS info is lost or deemed unreliable. That feature also looked good.

NAVSSI with COMDAC gets a thumbs up from me at least based on what I saw and heard from the CO of the ship."

# Specific Questions

## System Specific Issues

### System Development

**What is the schedule for initial delivery of the ECDIS-N certifiable equipment and computer program?**

**NAVSSI Lite System was only a design concept in Feb 2001. PDR was held in Apr, CDR in Jun, Land based testing done in Aug, and presently NAVSSI Lite is undergoing prototype installation/shipboard testing on MCM-4. Based on satisfactory testing, MDA fleet release decision will be made on 25 Sept. First production installation begins Oct 1.**

### Compliance with OPNAVINST 9420.2

**What is schedule for DT/OT?**

**DT/OT in Mar/Apr '02.**

**Have all requirements for certification of readiness to commence operational evaluation (OPEVAL) and/or follow-on operational test and evaluation (FOT&E) been met?**

**Draft TEMP is under review, DT, OTRR are still required prior to OPEVAL**

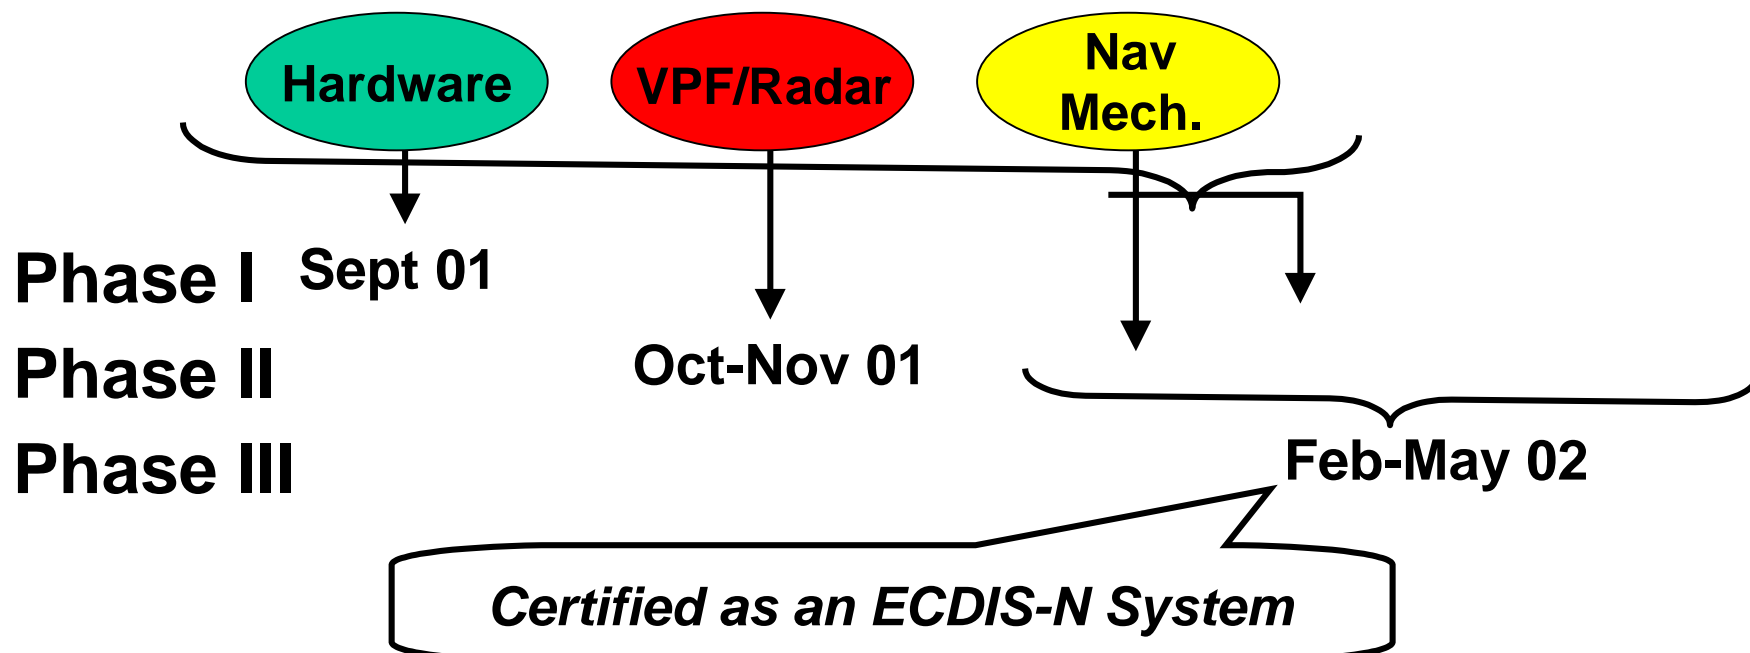

## Specific Questions

If so, what were the dates? If not, what is the schedule for compliance with the requirements?

Components of the system will be evaluated incrementally (to reduce risk) in a phased parallel approach that culminates in final system integration in February '02, followed by the formal DT/OT events in Mar/Apr '02.

# Specific Questions

**Are there any requirements that the candidate system will not meet by Target Configuration Date? If so, what is the schedule for corrective action?**

**No. NAVSSI does not require TCD busts at this time**

**Are there any requirements that need amplification or clarification?**

- Shock testing for AEGIS platforms
- NAVCERT: What does this entail? Waiting for revised NAVSEAINST
- VDU spec not finalized ---this is a NIIMA action item.
- Geosym 4, which continues to evolve and still has not been approved/finalized
- DTDS: NIMA found problems with their DNC Test Data Set during the Direct Read Testing at C2CEN. Fixes still in progress. What is the re-look plan for systems that previously received a NIMA cert for Direct Read on earlier, incomplete prototype Test Data?
- Many 9420.2 requirements in section 3 have no corresponding sec 4 test methods. Working with OPTEVFOR
- DNCs: none have been certified for navigational use.

# Specific Questions

## Security Issues

Are there any classification problems that need to be addressed either procedurally or in the equipment design? (i.e. Are there any issues associated with storing and/or displaying classified chart information on the identified system?)

**No, NAVSSI Lite is capable of displaying classified charts by NSA**

## System Test

What is status of DNC direct read certification?

**C2CEN is working directly with NIMA. An initial look was conducted in June '01 leading to required action by both C2CEN (some fixes to COMDAC) and NIMA (some fixes required to the Test Data Set). N096 and OPTEVFOR will be invited to observe follow-up testing this Fall. These tests are scheduled as follows:**

**Oct is the next scheduled date (w/o VDU) and Nov or Dec for VDU if VDU spec firm.**

# Specific Questions

**Has a schedule for validation of system specific procedures for NAVCERT with candidate ECDIS-N been established with SPAWARSYSCEN Charleston (i.e. NAVSSI Block 3 Build 4, NAVSSI Lite, and VMS)? If not, what is the proposed schedule for this validation?**

**No NAVCERT contact has been established. The revised NAVSEA instruction has not been sent out for review.**

## CVBG Specific Issues

### CVBG Equipment Procurement

**Does equipment need to be procured to support shore-based training?**

**Yes, NAVSSI training involves a full interactive classroom. Each student will have their own NAVSSI (training version) system. These system are COTS and can be procured on short notice (approx three weeks)**

## Specific Questions

If it hasn't been procured, what is the procurement schedule (for each installation)?

After completion of design review, most likely Sept time frame

Does equipment need to be procured to meet the CVBG requirements?

Yes, NAVSSI Lite given the go ahead for 13 units.

The remaining units awaiting MDA procurement decision and FY02 funding.

## Specific Questions

Are there any known funding or procurement issues that will prevent meeting of the schedule?

**No, Schedule is aggressive, but meets NAVSSI Lite installation plans**

CVBG D-30 Process (Compliance with CLF CPF INST 4720.3A)

Have required entries been made into the electronic CCB?

**Yes**

Will all final installations and/or computer program deliveries be completed by the identified Target Configuration Date(s) (TCD)?

**Yes, future upgrade fall under minor software modification and are not considered TCD busts**

# Specific Questions

## Installation

Are there any prerequisite installations/configurations required?

No, (WRN-6 or GVRC aboard, radar, fathometer)

What equipment changes are required?

Insert rack and wire diagrams, Field change Kit# 9

# Specific Questions

Have all required organizations approved installation of equipment and computer programs?

Many different organization involved, however the bottom line is if FLTCINC wants it, they will get it. Currently NAVSSI Lite is approved for all ship classes, although not all members have voted yet.

If not, what is schedule for obtaining approval?

ECCB entry have been made. Awaiting ECCB approvals

How much time is required to complete each installation?

Average of 10 days, Two weeks if you include training

# Specific Questions

Which required organizations have agreed to the proposed schedule(s)?

Dependent on ship class, data can be found in ECCB.

Typical results so far:

CNAP	approved
SPAWAR	approved
CNSP	approved
PMS312	none
BGCDR	some
CNSL	some
C2F	some
BRB	some
CINC	some

Who (i.e. shipyard, Alteration Installation Team, etc.) will perform the installations?

AIT

## Specific Questions

**What specific documentation has been prepared to support the installations?**

**JCF, SAR, SID, TM, APL, Training, ICD. All document available in draft form (SCCP, JCFs, ICDs, SARs, Tech Manuals, APL, Maintenance). Documentation awaiting final approval.**

**Have any issues been identified that will delay and/or prevent installation?**

**Tycom waiver on ILS certification documentation (commonly waived for most programs), SECNAV within 5 years DECOM waiver.**

**Awaiting OPNAV for ILS cert waiver, SECNAV waiver submitted to TYCOMS for action**

# Summary

## Summary

- NAVSSI Lite schedule is aggressive but “doable”
- Some TCD waivers will be required

## How can N096 help?

- Need assistance on SECNAV waiver
- Need a coordinated FLT and CNO message on waiver to standard installation process
- May need support for TCD waivers

**BACK UP**
